

"A rivet provided with elastic feet"

ABSTRACT

The rivet (1) comprises a bearing head (2), a pulling stem (3) and an insertion body (4) which itself comprises:

- at least two longitudinal flat surfaces (13) interrupting a notched portion (14);
- at least two elastic feet (15) each comprising a first end elastically joined to
5 the insertion body (4) and a second end which is free, each of these elastic feet (15) being adapted to adopt a folded position in which it is folded along the insertion body (4), on one of said flat surfaces (13), and a tightened position in which it is arranged transversely of the general orientation of the insertion body (4);
- 10 the bearing head (2) comprising at least one slot (9) enabling it to deform radially.
